The global Two-dimensional Electrophoresis market size is predicted to grow from US$ 453 million in 2025 to US$ 554 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

Two-dimensional electrophoresis (2-DE) is a high-precision experimental instrument used for protein separation and analysis, combining isoelectric focusing (IEF) and SDS-polyacrylamide gel electrophoresis (SDS-PAGE) techniques. It first separates proteins based on their isoelectric points using IEF and then further separates them by molecular weight using SDS-PAGE, achieving high-resolution two-dimensional separation of proteins. Two-dimensional electrophoresis is widely used in proteomics research to analyze complex protein mixtures, identify protein expression differences, and study protein functions. Its high sensitivity and separation capability make it an essential tool in the life sciences field.
