## Abstracts

The global Two-Dimensional Material FeTe market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The two-dimensional material FeTe is composed of iron and tellurium elements, is an iron-based layered superconductor, and is the parent material of the simplest iron-based superconductor series. The crystal structure of iron telluride consists of successive stacks of FeTe layers, in which a square lattice of iron atoms is sandwiched between two layers of dilute chalcogen.

The two-dimensional material FeTe has the following characteristics: layered structure, antiferromagnetism or ferrimagnetism, superconductivity, and special photoelectric properties. It is one of the important objects for the study of two-dimensional materials and condensed matter physics.
