Two hand safety modules help prevent injury to machine operators by keeping their limbs away from dangerous machine movement. Two hand safety modules are made up of two elements, a control board and a safety control module. The control board has two control devices that force the use of two-hand activation simultaneously. A two hand safety module provides an emergency stop signal to the machine control circuitry when the two-hand safety device inputs are removed or released.

The global Two Hand Safety Modules market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
