A Two-piece Pneumatic Ball Valve is a valve product used for automatic on-off control in industrial pipeline systems. It consists of a two-piece ball valve body and a pneumatic actuator. Its operating principle is to use compressed air to drive the actuator, which in turn rotates the valve stem and ball by 90 degrees, thereby opening or closing the flow of media. Compared with manual ball valves, Two-piece Pneumatic Ball Valves are better suited to automated control scenarios. They can be connected to PLC, DCS, or field control systems to enable remote operation, fast response, and coordinated batch control.

The product features a relatively compact structure, good sealing performance, low flow resistance, and convenient installation and maintenance, making it widely used in general industrial pipeline systems. Two-piece Pneumatic Ball Valves are commonly applied in water treatment, compressed air systems, chemical pipelines, fuel lines, environmental protection equipment, and various automated machinery systems. Their main functions include media on-off control, equipment interlocking, process switching, and pipeline isolation.

United States market for Two-piece Pneumatic Ball Valve is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
