The global Two-Platen Electric Injection Molding Machine market size is predicted to grow from US\$ 362 million in 2025 to US\$ 855 million in 2032; it is expected to grow at a CAGR of 13.7% from 2026 to 2032.

In 2025, the production of two-platen electric injection molding machines reached 450 units, with an estimated average selling price of US\$822,000 per unit. A two-platen electric injection molding machine is a medium-to-large-scale injection molding system characterized by a structural design featuring two main platens—a fixed platen and a moving platen—and utilizing servo motors, ball screws (or electric mold opening/closing mechanisms), electric injection units, or electric clamping systems to execute its primary operations. It combines the advantages inherent to two-platen machines—specifically high clamping force, a compact footprint, and excellent adaptability to large molds—with the benefits of electric motor technology, including high precision, low energy consumption, low noise levels, and high repeatability. These machines are primarily utilized for the molding of large-scale plastic components in sectors such as automotive, home appliances, logistics packaging, and industrial containers. The upstream supply chain encompasses major components such as machine frames, platens, tie bars, ball screws, servo motors, drives, controllers, injection units, screw-and-barrel assemblies, sensors, and auxiliary automation equipment. Downstream demand is driven primarily by the need for large-scale lightweight components for new energy vehicles, automotive exterior parts, home appliance housings, logistics pallets, turnover boxes, and industrial containers. Gross margins range from approximately 25% to 45%.
