The global Two-Platen Hydraulic Injection Molding Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A two-platen hydraulic injection molding machine is a type of manufacturing equipment used to produce plastic products by injecting molten material into a mold. This machine consists of two platens, or platforms, which are movable and controlled by hydraulic systems. The upper platen holds the mold closed during the injection process, while the lower platen contains the reciprocating screw or ram that injects the molten plastic. The two-platen design allows for more precise control over the mold closing and opening actions, reduces cycle times, and enables the production of more complex and intricate plastic parts.
