A two-stage turbocharger, also known as a twin-turbo or bi-turbo system, is a sophisticated forced induction system that employs two turbochargers of different sizes to enhance an engine's efficiency and performance across a broad range of operating conditions. The primary smaller turbocharger is designed to provide quick spooling at low engine speeds, reducing turbo lag and delivering immediate power and torque. In contrast, the larger secondary turbocharger takes over at higher engine speeds, supplying increased air pressure and maintaining high performance as the engine demands more power. By combining the strengths of both turbochargers, the two-stage system optimizes the engine's response and efficiency, resulting in improved acceleration, higher power output, and better fuel economy, making it particularly beneficial in high-performance and heavy-duty applications.

The global Two-Stage Turbocharger market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
