The global Two-stroke Single Cylinder Diesel Engine market size is predicted to grow from US\$ 2161 million in 2025 to US\$ 2504 million in 2032; it is expected to grow at a CAGR of 2.2% from 2026 to 2032.

A two-stroke single-cylinder diesel engine is an internal combustion engine that completes a power cycle in two strokes of the piston (one crankshaft revolution) and operates on diesel fuel. In this design, the engine has a single cylinder where both the intake and exhaust processes occur during each stroke.

The two-stroke cycle typically involves a combined intake and compression stroke followed by a power and exhaust stroke, resulting in a more compact engine with fewer moving parts compared to four-stroke engines. This design can provide higher power-to-weight ratios and simplified construction, making it suitable for various applications, including small vehicles, generators, and marine engines. However, two-stroke engines may produce more emissions and consume more fuel compared to their four-stroke counterparts.
