A two tier trolley is a type of shopping cart that is designed with two separate levels or decks for carrying groceries or other items. This design allows shoppers to better organize their purchases, with larger or heavier items placed on the lower level and smaller or lighter items on the upper level. The two tier trolley may also help prevent damage to delicate items by keeping them separate from heavier products. These trolleys are often found in supermarkets and grocery stores and are available in various sizes and designs to accommodate different customer needs. Some models may have a fixed second tier, while others may have a removable or foldable upper deck for added flexibility. Two tier trolleys can be particularly useful during large shopping trips when customers need to purchase a significant amount of items, as they provide more storage space without increasing the difficulty of maneuverability like a traditional single-level cart might.

The global Two Tier Trolley market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
