The global Two-way Airplane Solenoid Valve market size is predicted to grow from US$ 60.41 million in 2025 to US$ 63.39 million in 2032; it is expected to grow at a CAGR of 0.7% from 2026 to 2032.

A two-way airplane solenoid valve is an electrically operated valve that controls the flow of air or other fluids in an airplane's pneumatic system. It is typically used to control the pressure and flow of air to different parts of the aircraft, such as the brakes, landing gear, and other pneumatic components.

The two-way solenoid valve is designed to have two ports, an inlet port and an outlet port, that allow air or fluid to flow through the valve in either direction. When the valve is energized, the solenoid coil creates a magnetic field that pulls a plunger or armature inside the valve, allowing air or fluid to flow through the valve in one direction. When the valve is de-energized, a spring returns the plunger or armature to its original position, blocking the flow of air or fluid through the valve.

United States market for Two-way Airplane Solenoid Valve is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Two-way Airplane Solenoid Valve is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Two-way Airplane Solenoid Valve is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
