According to our LPI (LP Information) latest study, the global Two-Wheeler Catalytic Converter market size was valued at US\$ million in 2023. With growing demand in downstream market, the Two-Wheeler Catalytic Converter is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Two-Wheeler Catalytic Converter market. Two-Wheeler Catalytic Converter are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Two-Wheeler Catalytic Converter. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Two-Wheeler Catalytic Converter market.

A catalytic converter is an exhaust emission control device that converts toxic gases and pollutants in exhaust gas from an internal combustion engine into less-toxic pollutants by catalyzing a redox reaction (an oxidation and a reduction reaction). Catalytic converters are usually used with internal combustion engines fueled by either gasoline or diesel—including lean-burn engines as well as kerosene heaters and stoves.

The rising strict emission norms for two-wheelers is one of the primary drivers for market growth. The increasing levels of vehicular emissions is inducing the governments of developing countries such as India and China to raise the stringency levels of two-wheeler emission norms. This, in turn, is foreseen to drive the requirement

for catalytic converters. As a result, two-wheelers will be equipped with enhanced substrates to adhere to the proposed emission standards. Moreover, these additions of substrates and other emission control kits are likely to increase the price of two-wheelers over the next four years. Furthermore, with the government of India elevating its emission standards, the two-wheeler market in the country is expected to see a bigger penetration of fuel-injected vehicles.
