The global TWS Earbud Chipset market size is predicted to grow from US$ 7655 million in 2025 to US$ 11280 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2024, global TWS Earbud chip production reached 2.28 billion units, with an average selling price of US$3.25 per unit. The TWS Earbud chip set is the core hardware component that supports true wireless stereo earphones. It can be divided into six functional categories: main Bluetooth control chip, power management chip, sensor chip, audio processing chip (including active noise cancellation chip), transmission chip, and touch/voice recognition chip. The TWS Earbud chip set belongs to the upstream of the TWS earbud industry. Upstream components include main control chips, power management chips, memory chips, batteries, printed circuit boards/flexible circuit boards (PCBs/FPCs), and acoustic components. The components with the highest cost value are the main control chip, battery, and PCB/FPC, each accounting for approximately 15%. Downstream companies in the TWS Earbud chip set market include global mobile phone brands such as Apple, Samsung, Huawei, OPPO, and Xiaomi, as well as professional audio manufacturers such as Harman, Sony, Skullcandy, Edifier, and 1More.

From a technical perspective, smart audio control chips face high technical barriers. They must integrate multiple functions, including audio codecs, Wi-Fi/Bluetooth connectivity, far-field and near-field acoustic algorithms, and low-power technologies. Future development trends for control chips will primarily focus on continuously improving active noise reduction and voice wake-up capabilities. Furthermore, they also place high demands on process precision.
