The global Type-C Conductive Bulk Bag market size is predicted to grow from US\$ 1762 million in 2025 to US\$ 2700 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

In 2025, global production of Type-C conductive bulk bags reached 316 million units, with an estimated average selling price of US\$5.7 per bag. Type-C conductive FIBCs are flexible medium-sized bulk containers made by interweaving conductive yarns, filaments, or strips into a PP woven base fabric and conducting static electricity to the ground during filling, handling, and unloading through a grounding point. The key difference is that they must be grounded, unlike ordinary Type A ton bags, Type B ton bags with low breakdown voltage but no conductivity, and Type D static dissipation ton bags that do not rely on external grounding. Type C is defined as being made of conductive fabric/plastic sheet or interwoven conductive wire/fiber and requires grounding during loading and unloading. Applications are concentrated in chemical powders, fine chemicals, pharmaceutical intermediates, resin plastics, pigments and dyes, metal powders, lithium battery materials, agrochemicals, food additives, and filling and unloading scenarios where there are combustible dust, flammable vapors, or solvents. The upstream of the industry chain mainly includes polypropylene resin, PP flat yarn, conductive yarn/carbon fiber/metal conductive yarn, antistatic agents, UV stabilizers, PE/aluminum foil/EVOH inner lining film, sewing thread, slings, labels, and grounding point accessories; the midstream includes drawing, circular/plain weaving, coating, cutting, sewing, conductive network connection, inner lining composite, antistatic/conductivity performance testing, and customer customization; the downstream includes chemicals, pharmaceuticals, plastics, minerals, food powders, lithium battery materials, hazardous chemical storage, and international logistics. Gross profit margin is approximately 20%-35%.

United States market for Type-C Conductive Bulk Bag is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
