The global Type-D Conductive Bulk Bag market size is predicted to grow from US\$ 469 million in 2025 to US\$ 772 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

In 2025, global production of Type-D conductive bulk bags reached 51 million units, with an estimated average selling price of US\$9.4 per unit. Type-D conductive FIBCs utilize special electrostatic dissipative base fabrics, quasi-conductive yarns, antistatic yarns, or dedicated electrostatic protection materials such as CROHMIQ to safely release static electricity generated during filling, handling, and unloading in a low-energy manner, preventing ignition sparks, brush discharges, and propagating brush discharges. Type-D bags do not require grounding, making them more suitable for high-risk powder packaging scenarios with unstable grounding conditions, frequent mobile operations, potential operator negligence in grounding, or where minimizing human error is desired. Their main applications are concentrated on packaging flammable powders, combustible dusts, chemical powders, resins, plastic particles, pigments, pharmaceutical raw materials, agrochemicals, food additives, metal powders, lithium battery materials, and bulk materials in environments containing flammable gases, vapors, or solvents. They are particularly suitable for filling lines where grounding reliability cannot be reliably guaranteed, mobile unloading scenarios, and cross-regional logistics. The upstream of the industry chain mainly includes polypropylene resin, PP flat yarn, static dissipative yarn, quasi-conductive yarn, CROHMIQ-type special base fabric, antistatic additives, UV stabilizers, PE/aluminum foil/EVOH inner lining film, straps, sewing thread, labels, and testing consumables; the midstream includes drawing, weaving, coating, cutting, sewing, inner lining lamination, static performance testing, clean packaging, and customer customization; the downstream mainly includes chemicals, pharmaceuticals, food powders, plastic resins, lithium battery materials,

agrochemicals, mineral powders, and hazardous chemical logistics. Gross profit margins range from approximately 25% to 45%.

United States market for Type-D Conductive Bulk Bag is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
