The global Tyre Curing Press market size is predicted to grow from US\$ 1046 million in 2025 to US\$ 1220 million in 2031; it is expected to grow at a CAGR of 2.6% from 2025 to 2031.

Tyre Curing Press, (Tire Curing Press in America), is a kind of machine which is used in the vulcanization process of tyre production.

There are two generic curing press types, mechanical and hydraulic. Mechanical presses hold the mold closed via toggle linkages, while hydraulic presses use hydraulic oil as the prime mover for machine motion, and lock the mold with a breech-lock mechanism. Hydraulic presses have emerged as the most cost-effective because the press structure does not have to withstand the mold-opening pressure and can therefore be relatively lightweight. There are two generic mold types, two-piece molds and segmental molds.

HF TireTech Group, Kobe Steel and MHIMT captured the top three global revenue share spots in the tyre curing press market. HF TireTech Group dominated with 8 percent revenue share, followed by Kobe Steel with 7 percent revenue share and MHIMT with 6 percent revenue share.

The production of Tyre Curing Press was largest in China, which accounts for 41% of the market. Europe is the second large production area with 19% while India is the third largest with 12%. In terms of consumption, China is the largest market because of the fast development of automobile industry.
