A U-shaped electric toothbrush is a new type of electric toothbrush with a U-shaped brush head that covers both upper and lower teeth. It uses high-frequency sound waves or micro-vibrations to clean the tooth surface and spaces between teeth, freeing your hands and shortening brushing time. It typically has multiple vibration modes and a timer function, and uses a silicone or soft-bristled brush head to reduce gum irritation. It is suitable for children, the elderly, and those with limited manual dexterity. It is also gaining popularity among some adults as a convenient toothbrush tool.

The U-shaped electric toothbrush industry chain can be summarized as follows: the upstream sector primarily includes suppliers of raw materials and components such as silicone, plastic molds, micromotors, batteries, electronic control chips, and sensors. Examples include Dow Chemical and Wacker Chemie, which provide silicone and molds; Nidec and Bosch Sensortec, which provide micromotors and motor driver chips; and LG Chem and Panasonic, which provide lithium batteries and charge management systems. The midstream sector comprises complete machine assembly and design companies, responsible for integrating the U-shaped brush head, vibration system, electronic control, and battery into the handle. The downstream sector encompasses the end consumer market and application industries, primarily targeting individual oral care consumers, but also finding applications in dental clinics and nursing facilities. Typical distribution channels include e-commerce platforms (Amazon, Tmall), offline
