## Abstracts

The global U-Shaped Linear Motor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Ironless linear motor is a new type of special motor, and the force applying component of the ironless linear motor is placed between two magnetic tracks. They are also known as U-channel motors. There is no iron core in the coil of the force applying component, which is called a coreless motor, also known as a U-shaped linear motor. Linear motor is an electric transmission device that directly converts electrical energy into linear motion mechanical energy. The copper winding of the U-shaped linear motor is enclosed and located in the air gap at the center of the two rows of magnets. Since there is no iron core inside the motor, there will be no attraction or cogging force between the force applying component and the magnetic track.
