A gimbal on a UAV is a support system that allows an object, like a camera, to stay stable while the drone is flying. It works by balancing and rotating the camera, providing a smooth platform for capturing high-quality images or videos. Gimbals range from simple, single axis versions to sophisticated, three-axis models, each offering varying degrees of stability. Their integration into drone designs has revolutionized aerial photography and videography, making it a vital component in the drone industry. Usually Gimbals will be integrated with camera systems and laser ranging systems to achieve product customization.
