UAV ground control station is a center or a system that allows human operators to control the functioning of drones. A ground control station (GCS) is a command and control center to operate, communicate, or monitor a remotely controlled device. It integrates a combination of hardware and software, includes a human-machine interface, computer, telemetry, electro-optical sensors, acoustic sensors, and controllers to relay information and commands using wireless technologies, like radio frequency.

The demand for lightweight and portable ground control system (GCS) is one of the primary growth factors for this market. The frontline soldiers require lightweight, portable GCSs that can be easily handled and operated during gunfire and other on-field threats during field operations. To enable the aerospace and defense companies integrate their

own platforms to the unit, the vendors are offering GCS that are compatible with original equipment manufacturers. These inventive features give the latest GSCs tactical advantage over the fixed GSCs.
