Drone batteries are the part of the drone power system that stores and releases energy. Most of the power batteries used in drones are lithium polymer batteries. Compared with traditional batteries, lithium polymer batteries have advantages such as light weight and high discharge rate. As the main power source for drones, lithium batteries affect the range and flight time of drones.

As the cost of developing and producing drones continues to decrease, their application scope is becoming increasingly wide, with strong market demand and broad development prospects. The market size will continue to maintain rapid growth in the future. In particular, the rise of the civil drone market has driven the growth in demand for drone lithium batteries. With the further maturity of the market and the continuous development of lithium battery technology, civil drone lithium batteries will become a highlight that promotes the rapid growth of the consumer lithium battery market.

In recent years, the drone industry has received high attention from governments at all levels and key support from national industrial policies. The country has successively introduced a number of policies to provide a clear and broad market prospect for the development of the civil drone industry, provide a good production and operation environment for enterprises, and further accelerate the development of the civil drone lithium battery market.

With the increasing maturity of drone technology, drones can perform reconnaissance, surveying, command and dispatch, emergency lighting, fire fighting, transportation and throwing, search and rescue and other tasks in emergency rescue. The prospects are extremely broad. With the comprehensive integration and construction of my country's emergency rescue forces, civil drones have also ushered in major development opportunities.
