The flight sensing technology of UAV is mainly used for two purposes, one is to provide flight control system, because the main function of flight control system is to control the aircraft to achieve the desired attitude and space position So the sensing technology of this part mainly measures the physical quantities related to the motion state of the aircraft, including Gyro, accelerometer, magnetic compass, barometer, GNSS module, and optical flow module. Another use is for autonomous navigation systems for UAVs, which are path and obstacle avoidance planning systems, so you need to be aware of the state of your surroundings, such as the location of obstacles The related modules include ranging module, object detection, and tracking module, etc.
