The global UBM Plating Service market size is predicted to grow from US\$ 248 million in 2025 to US\$ 375 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Flip chip bonding is increasingly taking over conventional wire bonding for bonding of microchips, as semiconductor packaging technology advances toward smaller sizes and higher density. Under Bump Metallurgy (UBM) formation to bond metal pads to solder is considered to be essential in flip chip bonding. ?UBM? stands for Under Bump Metallurgy (also described as Under Bump Metal or Under Barrier Metal) and is applied to provide solderability to electrodes of semiconductor wafers. UBM is formed by plating wafers or other methods (then UBM is sometimes called as ?top metal plating?).
