The report requires updating with new data and is sent in 48 hours after order is placed.

The world has currently formed a raw material supply structure that is mainly vegetable oil, supplemented by waste cooking oil and animal fats. However, based on considerations of food security and environmental protection, major biodiesel countries led by the European Union are actively promoting the transformation of their raw material structure to non-grain raw materials such as waste cooking oil (UCO). Used Cooking Oil (UCO) – sometimes referred to as waste cooking oil – refers to oils and fats that have been used for cooking or frying in the food processing industry, restaurants, and households. It can originate from both waste vegetable oil and animal fats.

The global UCO-based Biodiesel market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
