Ultra high molecular weight polyethylene (UHMWPE) is a new type of material with excellent performance, generally referring to linear long-chain polyethylene materials with a molecular weight of over 1 million. The high molecular weight and long molecular chain of UHMWPE endow it with superior properties such as impact resistance, wear resistance, high strength, chemical corrosion resistance, and low temperature resistance. Ultra high molecular weight polyethylene porous membrane is a porous and breathable film made from UHMW-PE polymer through a special process. It can be used as a filtration film and has characteristics such as chemical resistance, wear resistance, anti-static, breathability, and low friction coefficient.
