A UHV all-metal angle valve is a specialized valve primarily used in ultra-high vacuum systems to control the flow of gases. Constructed entirely from metal, including the valve body, valve plate, and sealing components, it is designed to ensure sealing integrity and reliability within an ultra-high vacuum environment. The purpose of this valve is to meet the stringent requirements of applications that demand the highest levels of vacuum; the UHV all-metal angle valve boasts excellent sealing capabilities, high corrosion resistance, and suitability for any extreme environment. The all-metal construction eliminates potential outgassing and adsorption issues that can arise with non-metallic materials in ultra-high vacuum conditions, thereby maintaining the stability and purity of the vacuum system.
