The global UKAS Temperature Calibration Services market size is predicted to grow from US\$ 856 million in 2025 to US\$ 1243 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

To address the issues of insufficient credibility of temperature measurement equipment calibration results, incomplete traceability chains, and the inability to meet stringent international quality system requirements, UKAS temperature calibration services emerged. With the advancement of global trade and the integration of quality management standards, particularly since the widespread establishment of the ISO standard system in the latter half of the 20th century, authoritative accreditation services in the field of measurement have experienced significant development. Currently, UKAS temperature calibration services have developed into an authoritative calibration system rigorously reviewed and accredited by the United Kingdom Accreditation Service (UKAS), covering various high-level standard devices such as constant temperature baths, dry-block calibrators, precision temperature bridges, and blackbody radiation sources. It is widely used in fields with stringent temperature measurement requirements, such as pharmaceuticals, food, aerospace, medical equipment, industrial manufacturing, and research laboratories. It provides internationally recognized calibration certificates traceable to national and international standards, ensuring the accuracy and reliability of measurement data, supporting compliance, and guaranteeing the quality and safety of products and processes.
