The global Ultra-Clear Rolled Photovoltaic Glass market size is predicted to grow from US\$ 6778 million in 2025 to US\$ 9091 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Ultra-Clear Rolled Photovoltaic Glass is a low-iron, high-transmittance glass specifically designed for crystalline silicon solar module encapsulation. Produced using a rolled process, it typically features embossed surface textures and may be tempered and anti-reflective coated to enhance mechanical strength and optical performance, meeting the transmittance, durability, and efficiency requirements of single-glass and double-glass modules. In 2025, Mainstream 2.0 mm coated photovoltaic glass was priced at around USD 1.8-2.1 per m², while 3.2 mm coated photovoltaic glass was priced at around USD 2.8-3.4 per m². Entering 2026, due to high industry inventories and loose supply-demand conditions, prices of 2.0 mm and 3.2 mm glass have fallen to around USD 1.3 per m² and USD 2.4 per m², respectively.

The upstream of ultra-clear rolled photovoltaic glass primarily consists of high-purity silica sand, limestone, soda ash, and glass-melting furnaces or rolled production equipment. Downstream applications include solar module manufacturers producing single-glass, double-glass, and BIPV modules. Glass producers must tailor products according to the module manufacturers' specifications, coating types, and production volumes, forming a closely integrated upstream-downstream supply chain.

Ultra-clear rolled photovoltaic glass is a core material for crystalline silicon modules, and its demand continues to rise with the growth of double-glass modules, distributed rooftop installations, and BIPV applications. Technological innovations focus on glass thinning, high transmittance, and anti-reflective coatings to improve module efficiency

and reduce overall weight. The industry is significantly influenced by raw material costs, production capacity distribution, and downstream installation trends, with high-transmittance, cost-effective products expected to be key drivers of future market competition.
