The global Ultra Filtration Membrane Systems market size is predicted to grow from US\$ 2129 million in 2025 to US\$ 3313 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2025, global production of ultra filtration membrane systems reached 68,000 units, with an average selling price of USD 32,000 per unit, total production capacity of 82,000 units, and an average gross margin of 42%.

Ultra filtration membrane systems are water treatment systems that use ultrafiltration membranes as the core separation unit. With membrane pore sizes typically ranging from 0.01 to 0.1 micrometers, these systems selectively remove suspended solids, colloids, bacteria, and macromolecular organic matter while allowing water and small solutes to pass through. A typical UF system consists of membrane modules, pressure vessels, pumps, piping, and automated control units, and is widely used in drinking water purification, wastewater reuse, industrial process water treatment, and pretreatment for reverse osmosis systems.

The global ultra filtration membrane systems market is experiencing steady growth, driven by increasing water scarcity, stricter drinking water quality standards, and rising demand for efficient and reliable water treatment solutions in municipal and industrial sectors. Municipal water and wastewater treatment and industrial water processing are the main application markets, with particularly strong demand from electronics, food and beverage, pharmaceutical, and chemical industries. Competition focuses on membrane material performance, system integration capability, operational stability, and total lifecycle cost, with clear trends toward larger-scale systems, modular designs, and integrated use with reverse osmosis and nanofiltration technologies.
