Ultra-Fine Organic Gypsum is a gypsum material processed by a special process. Its core feature is that its particle size reaches the 'ultra-fine' level (usually refers to an average particle size of ≤ 10 microns), and organic ingredients (such as natural plant fibers, polymer additives, etc.) are introduced during the production process, so that it combines the physical properties of traditional gypsum with the modified advantages of organic materials. This material is mainly used in high-end architectural decoration, special building materials and functional fillers, and achieves performance upgrades through microstructure optimization.
