HDMI (High-Definition Multimedia Interface) is a proprietary audio/video interface for transmitting uncompressed video data and compressed or uncompressed digital audio data from an HDMI-compliant source device, such as a display controller, to a compatible computer monitor, video projector, digital television, or digital audio device. HDMI is a digital replacement for analog video standards. But, it's not just a type of cable, cord, or connector. It's a technology standard that's designed to transmit high-definition audio and video signals. First of all, HDMI is the best possible way to transmit those signals. This technology can deliver a pure, uncompressed digital signal with crystal-clear images and multi-channel audio. Also, one HDMI cable can transmit both audio and video signals, which means you only need one cable to complete the entire

setup—cutting down on some of that cord clutter that's amassed behind your entertainment cabinet. Ultra HD High Speed HDMI Cable refers to the highest transmission speed of 48Gbps.
