The Ultra-high Vacuum Gate Valve is a critical component designed to control gas flow and isolate adjacent spaces in vacuum systems, achieving on/off operation through axial movement of the valve plate driven by mechanical transmission mechanisms. It operates within ultra-high vacuum environments, utilizing bellows seals, Viton, and other elastomers for dynamic sealing, while stainless steel construction ensures pressure resistance and corrosion durability. This valve is suitable for pure air and non-corrosive gases, enabling reliable isolation across wide pressure ranges in applications such as semiconductor manufacturing, scientific instrumentation, and precision engineering.
