The ultra-high vacuum system is a stand-alone, table-top ultra-high vacuum system that allows easy cooling and trapping of atoms. Applications range from basic quantum physics research to the development of sensors and new quantum technologies, making it a versatile and powerful cold atomic nucleus. He does this by using two cells (a source cell for achieving high atomic numbers and a science cell for maintaining ultra-high vacuum and excellent optical access) and transporting them under permanent vacuum.

The global market for Ultra High Vacuum System is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Ultra High Vacuum System market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
