## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Ultra Low Profile Screws are screws with extremely thin heads. They are sometimes called ultra-low head screws or slim head screws. Ultra Low Profile Screws include cross-hole, hexagon socket, hexagon bolt, etc. In addition to coarse-grained screws, tapping screws are also commercially available.

Ultra Low Profile Screws are used for screw fastening in areas where the screw head should not protrude. They can be attached to sheet metal parts, resin-molded parts, machined parts, etc., regardless of the part in question.

A countersunk screw is a screw in which the screw head does not protrude at all. However, when using a countersunk screw, it is necessary to countersink the part to which it will be attached. Depending on the processing method of the part, pan-finishing may add one more processing step to the part, thus increasing the cost. Also, when countersunk screws are used on thin sheets such as sheet metal, the dimensional limitation of the sheet's thinness makes it impossible to ensure a sufficient countersunk shape.

The global Ultra Low Profile Screw market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
