Ultra-low temperature (ULT) freezers are widely used for bulk storage of samples such as genomic material, cell lysates, tissue homogenates or vaccines, which are kept at -80°C or below. This is provided that they are well cared for and that preventive maintenance is performed regularly. They can preserve sample integrity for months or even years, making them a valuable asset for any laboratory that handles large quantities of irreplaceable materials. To ensure that samples in ULT storage are protected in the event of an unexpected power outage, most end users choose to integrate a ULT backup system.
