Electrode posited copper foil is the copper foil produced by the electrolytic method, which is made by dissolving the copper material into a copper sulfate solution. In professional electrolysis equipment, the solution is made into the original foil by direct current electrodeposition. Ultra-thin copper foil is a key material in batteries and other electronic fields, and its thickness is generally 6-12?m. But for high-end market demand, the market demand for copper foil with a thickness of less than 8?m is showing an upward trend.
