Ultra-thin switchgear in wind energy is the electrical cabinet used for wind turbines, which is used to manage the power flow generated by wind turbines. It is compact in design, light in weight and compact in shape, and can adapt to the narrow space in the wind turbine tower. Ultra-thin switchgear is usually used to accommodate electrical

components such as circuit breakers, fuses, transformers and switchgear. These components are used to regulate the current from the wind turbine generator to the grid or to the energy storage system. One of the main advantages of the ultra-thin switchgear is its compact design, which can be installed in the narrow space of the wind turbine tower. This helps to reduce the overall size and weight of the wind turbine, making it easier to install and transport.
