An ultra-trace oxygen sensor is a specialized type of sensor used to detect extremely low levels of oxygen in gas streams or liquids. These sensors are designed to be highly sensitive, allowing for the detection of oxygen concentrations as low as parts per billion (ppb). The sensor spot is typically made from a material that reacts with oxygen in the presence of heat, such as zirconia or yttria-stabilized zirconia. When oxygen comes into contact with the sensor spot, a chemical reaction occurs which generates an electrical

signal that can be measured. Ultra-trace oxygen sensors are commonly used in a variety of industries, including semiconductor manufacturing, medical gas production, and food and beverage packaging. They are also used in environmental monitoring applications to measure oxygen levels in water and air.
