The gross margin of major producers was generally in the range of 25%-40%. Ultra-white Low-E Glass is a high-end energy-saving glass product that uses low-iron ultra-white glass as the substrate and deposits a low-emissivity coating through online CVD or offline magnetron sputtering processes. The product combines the high light transmittance, low color deviation and excellent visual transparency of ultra-white glass with the low-emissivity, thermal insulation, heat preservation and energy-saving properties of Low-E glass. It is mainly used in architectural, automotive and other high-transparency energy-saving glass applications.

The upstream of Ultra-white Low-E Glass mainly includes ultra-white float glass substrates, silver targets, metal oxide targets, protective gases, coating equipment and auxiliary materials for deep processing. The midstream mainly involves coating, tempering, laminating, insulating glass processing and composite processing of Ultra-white Low-E Glass. Downstream applications mainly include high-end building curtain walls, energy-saving windows and doors, skylights, automotive panoramic roofs and thermal-insulating automotive glass. Among these, the architectural sector is the core source of demand, while automotive applications, display cabinets, refrigerated cabinets, greenhouses and other applications serve as supplementary markets.
