Ultra-white calendered photovoltaic tempered glass is a covering material used for solar photovoltaic modules. It is glass made through a calendering process. It has very high transparency and excellent optical properties, which can allow sunlight to penetrate better and improve the photoelectric conversion efficiency of photovoltaic cells. This type of glass is often specially processed and treated to enhance its weather resistance and safety. Among them, tempering is a common process. By heat treatment and rapid cooling of the glass, compressive stress is formed on the surface, which enhances the strength and impact resistance of the glass, thus improving the durability and safety of photovoltaic modules. Ultra-white rolled photovoltaic tempered glass is widely used in the solar photovoltaic industry. It is mainly used to manufacture surface covering materials for photovoltaic modules, protect photovoltaic cells from the influence of the external environment, and improve the performance and life of photovoltaic modules.
