The report requires updating with new data and is sent in 48 hours after order is placed.

Ultrafast lasers are now capable of reaching pulse lengths as short as 10 femtoseconds or less. They are used across a broad range of industrial and research applications, including spectroscopy, distance ranging, terahertz radiation generation, and capturing both biological and physical processes that normally happen across timescales that are simply too fast to measure. Ultrafast mirrors are now critical to almost every ultrafast laser application to minimise both this dispersion issue and laser damage.
