## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

An ultra-pure water system eliminates bacteria with UV radiation. An ultrapure water system is equipped with ultra-filters to remove endotoxins, DNase and RNase left over from bacteria destroyed by UV, resulting in extremely low total organic carbon (TOC). Additional carbon filters in these laboratory water purification systems reduce the need for pre-treatment, permitting tap water as a source.
