Ultrasonic Machining Services Are Subtractive Manufacturing Processes That Remove Material from the Surface of a Part by High-frequency, Low-amplitude Vibration of the Tool Against the Material Surface in the Presence of Fine Abrasive Particles. Ultrasonic Machining Services Can Be Customized to Produce High-precision Parts Made from Hard, Brittle Materials That Are Normally Difficult to Machine: Ultrasonic Machining Can Create Fragile Materials That Cannot Be Processed by Alternative Methods Such As Electrical Discharge Machining and Electrochemical Machining, Such As Glass and Non-conductive Metals; the Ultrasonic Welding Head Used in the Process Generates No Heat to the Workpiece, There is No Deformation of the Processed Material, and the Physical Properties of the Produced Part Will Always Remain Consistent.
