Ultrasonic bone scalpel is a surgical tool that uses high-frequency ultrasonic vibration to cut bone tissue. It can accurately cut bones without damaging surrounding soft tissue. Compared with traditional electric saws or drills, ultrasonic bone scalpels have smoother incisions, less trauma, and faster postoperative recovery. They are widely used in delicate surgeries such as neurosurgery, maxillofacial surgery, and spinal surgery.

The ultrasonic bone dynamic system uses high-frequency ultrasonic technology to achieve precise cutting, drilling and shaping operations during surgery. Compared with traditional surgical methods, the ultrasonic bone dynamic system has the advantages of less trauma, less bleeding, and faster recovery, and can significantly improve the surgical effect and patient recovery rate.
