The global Ultrasonic Osteotome System market size is predicted to grow from US\$ 629 million in 2025 to US\$ 896 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Ultrasonic osteotome system, also known as ultrasonic bone knife, uses electrostrictive technology to achieve the conversion of electrical energy and mechanical energy. It destroys bone tissue through the acceleration generated by mechanical vibrations hundreds of thousands of times per second, and uses the small amplitude of the blade tip to protect soft tissue. Ultrasonic bone knife can be widely used in precise and high-risk orthopedic surgery.

As a high-precision device in modern surgery, ultrasonic osteotome system is mainly used in neurosurgery, spinal surgery, otolaryngology and maxillofacial surgery. The market drivers include: First, with the aging of the population, the number of patients with orthopedic diseases and degenerative lesions continues to rise, driving the demand for minimally invasive and safe surgical equipment. Second, the continuous advancement of medical technology has enabled ultrasonic osteotome to have higher cutting accuracy and soft tissue protection advantages, which has improved clinical acceptance. In addition, the increase in government investment in medical infrastructure worldwide has also provided a good development environment for the market. However, the market still faces some challenges. On the one hand, the high price of ultrasonic osteotome system poses a certain burden on small and medium-sized medical institutions; on the other hand, the use of equipment requires high professional skills of doctors, and the training cost and learning curve may affect the speed of promotion. At the same time, the uneven medical resources in some regions have also limited the popularization of this technology. Overall, although the market prospects for ultrasonic

osteotome system are broad, technical maturity, cost control and clinical promotion are still key issues for its continued development.
