The Ultrasonic Reactor is an industrial grade device for pilot testing and small scale processing of liquids. By creating molecular cavitation, Ultrasonic Reactors ensure that whenever a process requires intensive mixing, the medium is homogeneously emulsified and come to a complete reaction, increasing yields dramatically. Power ultrasound is the process solution for various liquid applications, such as emulsification, particle size reduction, grinding or dissolving. The Ultrasonic Reactors delivers intense ultrasonic waves generating strong cavitation. Ultrasonic cavitation and the resulting shear forces fulfill demanding tasks without problems.
