## Abstracts

According to this study, the global Ultrasonic Sealing for Packaging market size will reach US\$ million by 2031.

The global ultrasonic sealing for packaging market is characterized by the supply of ultrasonic technology in form of ultrasonic sealing machines meant for packaging applications. The use of ultrasonic sealing machines have challenged the traditional sealing machines that employ heat sealing methods for sealing products such as pouch, bags, cases, etc.

Ultrasonic sealing machines for packaging employ the ultrasonic technology wherein the system generates heat within the material to be sealed rather than employing heat externally. Thus, the film of thermoplastic nature gets sealed from the heat that is generated within. This keeps the equipment and the tools that interact with the packaging material relatively cooler throughout the sealing process. The possibility to inculcate ultrasonic sealing technology by replacing heat sealing knives with ultrasonic sealing jaws in filling and sealing equipment has benefitted manufacturers, suppliers and distributors of packaging sealing equipment.

This report focus on Ultrasonic Sealing machines for Packaging market.
