Ultrasonic tin powder atomizer is a mechanical device that uses ultrasonic atomization to produce metal powder. When the ultrasonic power generator excites the ultrasonic transducer and vibrates the ultrasonic tool head as the transducer load, the molten metal will be atomized by ultrasonic vibration, and then the droplet-shaped metal particles will cool and solidify in the air and fall into the powder collection tube, and then be collected to become metal powder.

The application of ultrasonic tin powder atomizer in the fields of electronics, metallurgy, energy, aerospace, etc. is expanding day by day. As the performance requirements of modern industry for the particle size, purity, morphology and other aspects of metal powder materials are gradually increasing, this equipment has gradually received attention. The powder prepared by it has the advantages of high purity, low oxygen content, good sphericity, uniform particle size distribution, etc., and the equipment and process are simple, easy to operate, and the product quality is stable and controllable.

The global Ultrasonic Tin Powder Atomizer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
