The global Ultrasonic Tube Sealing Machine market size is predicted to grow from US\$ 1573 million in 2025 to US\$ 2375 million in 2031; it is expected to grow at a CAGR of 7.1% from 2025 to 2031.

The ultrasonic tube sealing machine uses ultrasonic to generate high impact heat at the sealing part of the plastic tube through the action of the transducer. The tube end tail quickly melts and seals. and there is no need to add any auxiliary products in the process. Plastic tube sealers are widely applied because of their easy operation, fast welding speed, high welding strength, and perfect sealing effect. The ultrasonic tube sealing machine is used to seal toothpaste, cosmetics, medicines, food, industrial supplies, and other plastic tubes and composite tubes. As an essential piece of equipment in modern industrial production, ultrasonic sealing machines have become the ideal choice for many companies with their advanced technology, efficient performance, and excellent quality. It not only meets production needs but also makes positive contributions to product quality improvement, environmental protection, and safety. With the continuous advancement of technology and the continuous expansion of application fields, it is believed that ultrasonic sealing machines will play a more important role in future industrial production.

Different from heat sealer, ultrasonic tube sealers use ultrasonic technology to enable molecules on the surface of the tubes to be fused together by ultrasonic friction. It combines auto tube loading, position correcting, filling, sealing and cutting. Ultrasonic automatic frequency tracking technology can ensure the stable operation of the ultrasonic sealing system and automatically adjust the sealing frequency without manual

adjustment. Convenient PLC touch screen control system and simple user interface make it easier for customers to operate the machine. It can seal plastic and aluminum-plastic tubes of various materials and diameters. It has a wide range of applications, covering many industries, such as food and medicine. With color mark detector. The color mark detector can detect the color mark of the tubes and automatically rotate the tubes to the right direction to guarantee consistency and perfection in sealing. The sealing lines are smooth and beautiful, improving the appearance quality of the product. Equipped with safety device, no induction, no tail sealing, and overload protection. It has a daily code printing function to meet the needs of product traceability and management. No pollution: no chemical pollutants will be produced during the ultrasonic tail sealing process, which complies with health standards and is suitable for applications in the food and pharmaceutical industries.
