The global Ultrasonic Visual Scaler market size is predicted to grow from US\$ 552 million in 2025 to US\$ 981 million in 2032; it is expected to grow at a CAGR of 8.7% from 2026 to 2032.

Ultrasonic visible dental scaler is a medical device for oral cleaning and hygiene. It combines ultrasonic technology and visualization technology, and can effectively remove dental plaque and food residue on the tooth surface and gum edge through high-frequency ultrasonic vibration and water flow washing. At the same time, through the visualization system, patients can observe the tooth cleaning process in real time, and doctors can also perform tooth cleaning operations more accurately. As imaging technology improves, the visualization system of ultrasonic scalers may provide clearer, higher-resolution images, allowing both physicians and patients to better observe the cleaning process.
