The global Ultraviolet Air Disinfection System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

An Ultraviolet Air Disinfection System is a technology that uses ultraviolet (UV) light to kill or inactivate microorganisms such as bacteria, viruses, and mold spores in the air. The system typically consists of UV lamps or bulbs that emit UV-C light, which has a wavelength of 254 nanometers. When air passes through the system, the UV-C light irradiates the microorganisms, damaging their DNA or RNA and preventing them from reproducing or causing harm. This helps to improve indoor air quality and reduce the spread of airborne diseases. Ultraviolet Air Disinfection Systems are commonly used in healthcare facilities, laboratories, commercial buildings, and residential settings.
